

The voice of our stakeholders

David Verde, from IDIAPJGol in Spain, is one of our key stakeholders who has actively collaborated with SHIFT-HUB across various activities, including the [Capacity Building Workshop on Living Labs](#).

The services David found most valuable included the Open Innovation Workshops, Living Labs, and Demo Days. Through these services, he has been able to enhance collaboration and innovation in his work.

IDIAPJGol operates the **Real World Lab**, a living lab designed to support large and medium-sized companies, start-ups, spin-offs, and research centers in co-creating, validating, and testing medical devices or any product focused on primary care. With access to 36 research groups, over 10,000 professionals (including general practitioners, nurses, psychologists, and physiotherapists), and SIDIAP (one of the largest primary care databases in the world), IDIAPJGol serves a population of 8 million patients in both rural and urban areas. The lab also boasts an experienced team specializing in quality assessment, including UX and other critical features. Reflecting on his experience, David shares,

We started collaborations by the end of the project but it is just the beginning of future collaborations.

Thanks to SHIFT-HUB, David has overcome challenges such as finding collaborators and has established new partnerships that are paving the way for future innovation and growth.

The Jordi Gol Primary Care Research Institute (IDIAPJGol) is the leading center for the study and promotion of health at the primary care level in Catalonia. With nearly 1,400 researchers, IDIAP works to drive and develop innovation, training, and clinical, epidemiological, and health services research within the Primary Care setting, with the goal of improving the healthcare system and people's health.
